

**STUCCO****REPRESENTATIVE SURFACES**

Homes  
Buildings

**GENERAL**

Stucco is designed as an integral finish and is seldom painted until it has weathered for many years and has begun to blotch, stain or streak.

Stucco that has aged for long periods of time will gradually “sand” as its top surface loses its film integrity. Major cracks should be cut out and repaired with a Portland Cement stucco mix. The entire old and “sanding” stucco surface should be rejuvenated with a waterborne acrylic sealer such as Stonite® Waterborne Acrylic Masonry Primer before any finish painting is attempted. This process will insure excellent adhesion, without suction spots or unevenness of sheen of the top coats of acrylic latex.

**SURFACE PREPARATION**

**WARNING!** If you scrape, sand or remove old paint from any surface, you may release lead dust. **LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE.** Wear a NIOSH-approved respirator to control lead exposure. Carefully clean up with a wet mop or HEPA vacuum. Before you start, find out how to protect yourself and your family by contacting the U.S. EPA/Lead Information Hotline at 1-800-424-LEAD (5323) or log on to [www.epa.gov/lead](http://www.epa.gov/lead).

- Brush or wash as necessary to remove surface contamination.

**PRIMERS**

- Stonite® Waterborne Acrylic Masonry Primer #7007
