## SURFACE PREPARATION

**WARNING!** If you scrape, sand or remove old paint from any surface, you may release lead dust. LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear a NIOSH-approved respirator to control lead exposure. Carefully clean up with a wet mop or HEPA vacuum. Before you start, find out how to protect yourself and your family by contacting the U.S. EPA/Lead Information Hotline at 1-800-424-LEAD (5323) or log on to [www.epa.gov/lead](http://www.epa.gov/lead).

The surface should be brushed to remove loose dirt and particles. Oil and grease should be removed by solvent cleaning. All mortar nibs and splatter should be “bricked down” until all protrusions are removed.

Mortar joints should be raked clean of loose mortar and “pointed up” with new mortar where necessary.

Small structural cracks should be filled with acrylic, urethane or silicone caulk for maximum flexibility.

Efflorescence should be removed and alkali neutralized with Crete-Etch® 1055 concrete etching solution.

Soft brick must be primed with Lacrylic® 7110 to prevent spalling or bleed through.

Brick containing a large amount of voids can be primed with Mason-Cote® 3751 Block Filler to give a more even appearance.
