

## COPPER, BRASS, BRONZE

## REPRESENTATIVE SURFACES

Fixtures  
Hoods  
Hardware

## GENERAL

As with ferrous metals, copper, brass and bronze will be attacked by atmospheric condition causing oxidation unless protected by a coating.

## SURFACE PREPARATION

**WARNING!** If you scrape, sand or remove old paint from any surface, you may release lead dust. LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear a NIOSH-approved respirator to control lead exposure. Carefully clean up with a wet mop or HEPA vacuum. Before you start, find out how to protect yourself and your family by contacting the U.S. EPA/Lead Information Hotline at 1-800-424-LEAD (5323) or log on to [www.epa.gov/lead](http://www.epa.gov/lead).

**Bare Metal**

- Solvent clean to remove dirt, oil, grease, soil and other contaminants. Use mineral spirits and a clean cloth that is changed frequently.
- If corroded or pitted, bare aluminum should be wire brushed or power tooled to remove oxidation.

**Previously Painted Surfaces**

- If the old paint film is loose, it must be removed by scraping, wire brushing or by power tool.
- Solvent or detergent clean to remove oil, grease and dirt.
- Sand glossy surfaces and remove the dust.

## PRIMERS

## Clear Coatings

No special primers needed. Clears are self-priming.

## Pigmented Coatings

Best — Grip-Coat® Vinyl Wash Primer #6906

**PRODUCT RECOMMENDATIONS - COPPER, BRASS, BRONZE**
