

GALVANIZED METAL

REPRESENTATIVE SURFACES

Conduit	Flat & Formed Steel
Corrugated Sheet	Pipe
Down Spouts	Structural Shapes
Ducts	Tanks

GENERAL

Galvanized metal is ferrous metal that is covered with a zinc rich coating to prevent corrosion. This is usually done by a "hot - dip" process.

SURFACE PREPARATION

WARNING! If you scrape, sand or remove old paint from any surface, you may release lead dust. LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear a NIOSH-approved respirator to control lead exposure. Carefully clean up with a wet mop or HEPA vacuum. Before you start, find out how to protect yourself and your family by contacting the U.S. EPA/Lead Information Hotline at 1-800-424-LEAD (5323) or log on to www.epa.gov/lead.

Galvanized metal is usually treated with an oil, silicone or silicate to protect it and prevent it from sticking together during shipment. This must be removed before painting by solvent washing or by weathering at least six months.

PRIMERS

- 100% Acrylic Latex Primers
- OR
- 100% Acrylic Latex Finish Coats direct to galvanized metal
- Grip-Coat® #6906 Vinyl Butyral Wash Primer for non latex finish coats
